

INSTALLATION INSTRUCTIONS FOR POST/POLE FITTING

Fix the mounting bracket to the ground (Fig.1), inserting the three threaded ties into the concrete; keep the bent towards the bottom and the threaded part, in which the post will be fixed, towards the high, making it rise from the frame for 40 mm.

Please be sure that the frame is well anchored.

NOTE :

The electric connections must be done by a qualified licensed electrician.

Before starting the installing, disconnect the power by turning off the circuit braker or by removing the fuse at the fuse box. Turning the power off using the light switch is not sufficient to prevent electric shock.

The link of the grounding of the fixture must be connected to the earth socket of the building.

Before locating the post base in the relevant, previously fixed, frame, make the wires, coming from the ground, go through the inside part.

ASSEMBLY

1. Insert the electrical wires through the post column and the coupler, install them on their own base.
2. Supporting the lantern, make the electric connection.
3. Install the lantern onto the pole/post fitting.
4. Turn on the power and the fixture is ready to use.
