

PRODUCT MAINTENANCE

All Products manufactured by Special Lite Products are manufactured from rust free aluminum with a durable scratch-resistant powder coated finish.

Like any outdoor products, some basic maintenance is required to ensure it looks good year after year.

CLEANING:

We recommend (at a minimum) a once a year cleaning using a soft cloth with non abrasive multi-purpose cleaner (such as dish washing soap).

REFURBISHING:

The durability of our products is unequalled in the industry. However, we do recognize that external factors can take a toll on the finish. These factors could include road salt, pesticides, and dog urine. Although these factors are not covered under our warranty they can be refurbished following these simple instructions.

REPAINTING / TOUCHING UP SOLID COLOR FINISHES

1. Use a wire brush to remove any loose paint and/or surface oxidation.
2. Wipe clean using a dry cloth
3. Repaint using an exterior grade spray paint.

HOW TO APPLY ANTIQUE FINISH:

1. Follow steps 1 thru 3 above.
2. Using a standard paintbrush, dip 1/8" of the brush into the antique paint.
3. Rapidly stroke the wet brush on a piece of cardboard removing 80% to 90% of the excess paint. In effect creating a nearly dry brush.
4. Lightly stroke the product with the paintbrush until the desired antiquing is achieved.

Please feel free to contact us with any questions such as the correct spray paint to use or to receive a small amount of the antiquing paint.
